

Virtual Medical Scribe Service

What is a virtual medical scribe?

Scribes are virtual assistants to health care providers that are experts in documenting your visit notes into the clinic's electronic health record ("EHR") software.

How does a scribe benefit you as a patient?

You will notice that your healthcare provider is able to focus exclusively on your care while simultaneously, the scribe is preparing your visit notes within the EHR software so the healthcare provider can review before finalizing your chart.

How does the use of a scribe impact the privacy of your visit?

The privacy and security of your personal and health information is of utmost importance to us. The scribes adhere to all relevant HIPAA Privacy and Security safeguards. Scribes are held to the same security standards as our nurses and providers.
